

Study Training

Clinical studies are reaching new levels of complexity and scale, with an average study now requiring hundreds of personnel spread across multiple countries. Using disparate systems to manage study training across large, dispersed teams over the course of an entire study duplicates efforts, reduces visibility, and increases compliance risk.

Veeva Study Training brings sponsors, CROs, and research sites into a single platform to streamline and automate training while ensuring inspection readiness in Veeva eTMF. With bi-directional connectivity to Veeva eTMF, Veeva Study Training streamlines training creation, assignment, and delivery, and automates filing of evidence back into Veeva eTMF. Pre-configured reports and automated alerts for new and updated curricula drive greater visibility, oversight, and compliance.

Benefits

Streamline and automate study training by bringing sponsors, CROs, and research sites into a single platform.

Ensure inspection readiness at all times in Veeva eTMF with automatic generation and filing of inspection-ready training certificates.

Improve compliance with automated training alerts, as well as on-demand curricula access for study personnel.

Improve oversight with unified reporting across sponsors, CROs, and sites.

Features

Single Platform for All Study Personnel

Manage study training curricula for sponsors, CROs, and research sites in one streamlined platform.

Seamless Connection with Veeva eTMF

Leverage connected clinical master data and version-controlled documents from Veeva eTMF to create role-based training.

Automated Training Assignment and Distribution

Automated alerts for new or updated curricula ensure study and site teams stay current with protocol training.

Quizzes and Assessments

Ensure competency with flexible, easy-to-configure quizzes that provide immediate feedback to remediate incorrect answers.

Unified Reports and Dashboards

Monitor oversight and compliance in real-time with pre-built dashboards and reports, or build your own.

Compliance and Validation

Audit trails, e-signatures, validation processes, and configurable business logic are all designed in a strict change control environment.

Veeva Clinical Platform

The Veeva Clinical Platform is the first eClinical platform offering EDC, CDB, eCOA, eTMF, CTMS, Payments, Site Connect, Study Training, and RTSM on one enterprise-class cloud platform. For the first time, medtech companies can connect clinical operations and data management with a unified platform to create a single source of truth and streamline clinical trials from study startup to close.
